Education

Chaitanya Bharathi Institute of Technology

Bachelor of Engineering in Computer Science | **CGPA: 9.21/10**

Hyderabad, India

Sept 2023 – May 2027

Technical Skills

Languages: Python, JavaScript, TypeScript, Java(Basics), C, SQL, HTML, CSS

Core Concepts: OOP, Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, REST APIs

Frameworks & Libraries: React.js, Node.js, Express.js, FastAPI, Flask, TensorFlow, Scikit-learn

GenAI & AI: LangChain, LangGraph, RAG Pipelines, Hugging Face, FAISS, YOLOv8, OpenCV

Cloud & DevOps: Docker, AWS(Basics), Virtualization

Databases: PostgreSQL, MySQL, MongoDB, Firebase

Developer Tools: Git, GitHub, Postman

Experience

Backend Developer Intern

Feb 2025 – Apr 2025

Plotch AI

Remote

- Migrated Snapdeal API integration to v2.0 in Python; ran **API contract tests** and validated data integrity across distributed microservices
- Built and Tested microservice **REST APIs** for Agentic AI workflows; wrote **integration tests** to verify end-to-end user-agent communication
- Worked in **Agile/Scrum** sprints; identified and resolved defects early through code reviews and test-driven iteration

Open Source Contributor

2025 – Present

SymPy, Ceph, BentoPDF, DataCurve (Project Mars)

Remote

- Added **SeaStore QA workunits** to **Ceph**, expanding automated test coverage for distributed storage systems; fixed type conversion bugs in **SymPy**
- Enhanced **BentoPDF** by implementing client-side **PDF to Word** conversion functionality and validating compatibility across multiple environments
- Proposed and secured acceptance of an **OSS-Fuzz** integration idea for **Ceph** in the **DataCurve (Project Mars)** program, aimed at improving code reliability through automated fuzz testing

Key Projects

NoHunger – Food Distribution Platform

GitHub

- Built a **MERN** platform connecting food donors, NGOs, and volunteers with **Google Maps** geolocation matching for optimized pickup and delivery
- Integrated a **WhatsApp bot** for automated donor-volunteer notifications; tested conversation flows and validated message routing end-to-end
- Developed an admin analytics dashboard for NGOs to monitor donation volumes, volunteer activity, and delivery success rates in real time

CivicPulse AI – Civic Issue Management Platform

GitHub

- Built a full-stack **Mobile** platform where citizens report infrastructure issues with image uploads; an **AI agent** auto-detects issue category, estimates severity, and routes tickets to the correct government department
- Implemented a **RAG pipeline** over historical complaint data using FAISS to inform priority scoring and resolution suggestions based on past area-specific outcomes
- Built a government dashboard for **SLA tracking** and ticket assignment, and an **AI assistant** that answers citizen queries about complaint status by retrieving live ticket and department resolution history

DocSearch – AI Document Search & Retrieval Platform

GitHub

- Built a **RAG pipeline** using LangChain and FAISS to query any PDF document via natural language, with semantic chunk retrieval and inline source citations
- Added a **Query Classifier Agent** to route factual vs. summarization queries and a **Query Rewriter Agent** to retry on low-confidence retrievals
- Implemented hallucination detection by cross-verifying LLM answers against retrieved source chunks, reducing factually incorrect responses

Achievements & Certifications

- Runner-Up** – JP Morgan Chase Code for Good Hackathon 2025
- Rank of 2,508** in TS EAMCET and secured **97.6 Percentile** in JEE Main
- Salesforce Certified Agentforce Specialist** – certified in Agentic AI automation platforms
- Super Contributor** – Hacktoberfest 2025 | **Junior Developer** – CBIT Open Source Community
- Solved **800+** problems on LeetCode – strong DSA and problem-solving record
